

RIPARIAN WALKTHROUGH

Alder Creek Field Brief

A compact record of shade, stream clarity, and foot-traffic observations across three marked stations.

03

STATIONS

4.2 C

AIR CHANGE

LOW

SURFACE HAZE

01 / SHADE

Continuous canopy

Canopy cover stayed continuous along the north bank. The open bend warmed first, with a clear temperature shift after 08:30.

NEXT CHECK

Watch the exposed bend during the next noon visit.

02 / WATER

Clear above bridge

Flow remained clear above the footbridge. A faint surface film appeared below the crossing but dispersed within five meters.

NEXT CHECK

Photograph the same reach after rainfall.

03 / TRAFFIC

Path use stayed light

Nine walkers and two bicycles passed the marked route. Most visitors paused at the bridge and stayed on the packed path.

NEXT CHECK

Repeat the count on a weekend morning.
